

EBAF Update

Norman G. Loeb, Seiji Kato, Fred Rose, Dave Doelling
NASA Langley Research Center, Hampton, VA

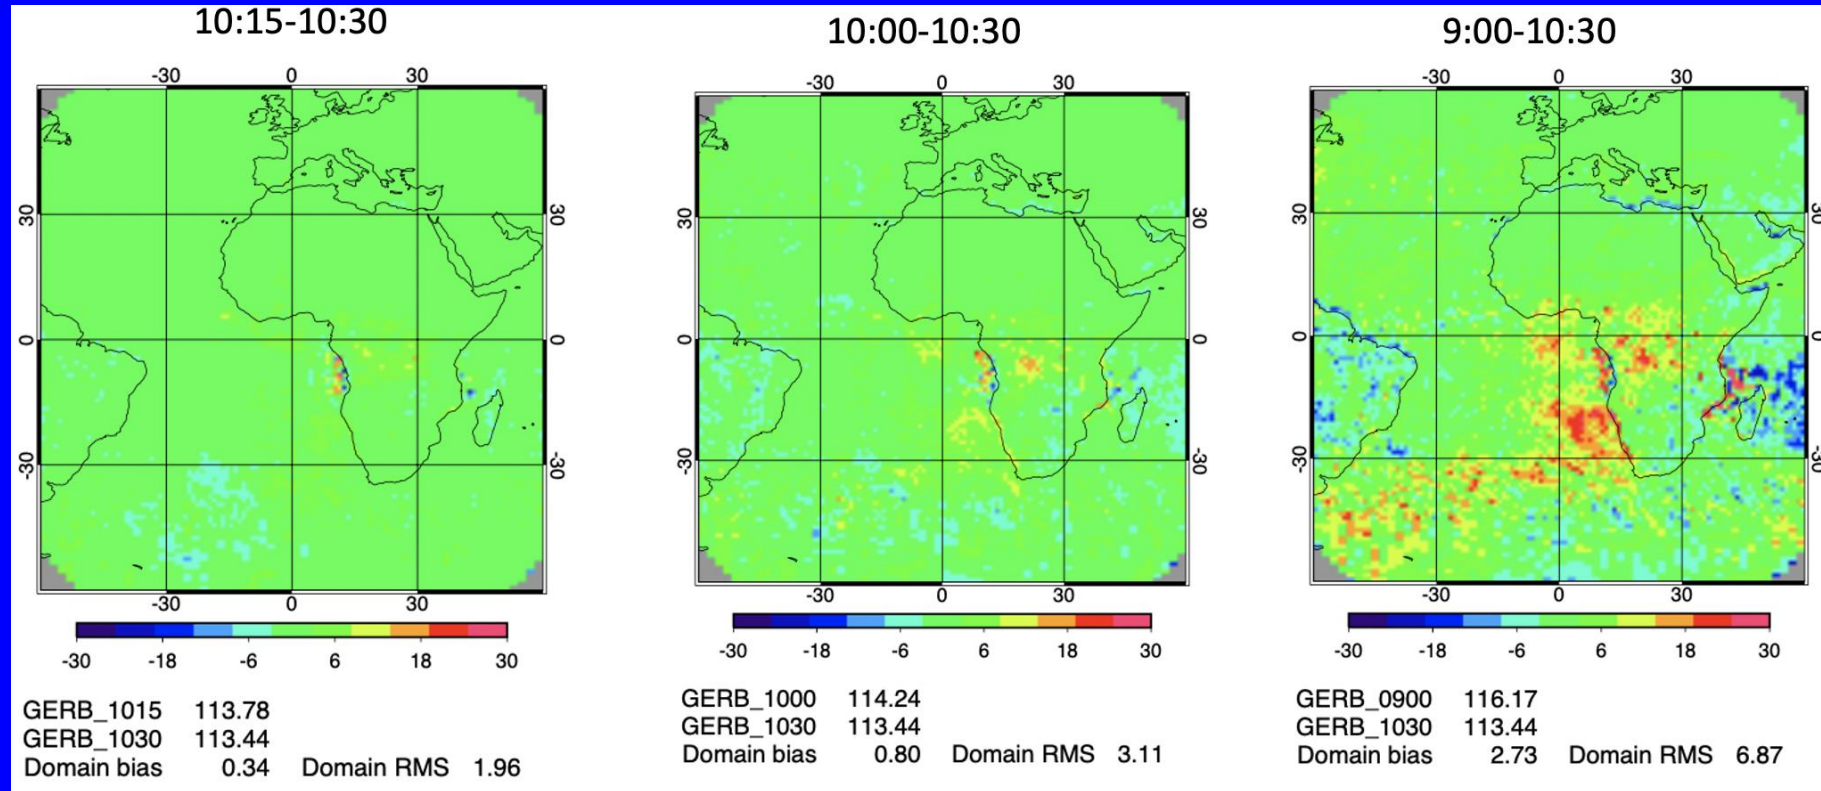

CERES Science Team Meeting, October 12-14, 2021
Virtual Meeting

Introduction

- Current version of EBAF (Ed4.1) uses Terra-Only for 03/2000-06/2002 and Terra+Aqua for 07/2002 onwards.
- An update to EBAF prior to Edition 5 is necessary in order to account for:
 - 1) Changes in Terra and Aqua MLTs.
 - 2) Artifacts and discontinuities in GEO cloud retrievals, which impact EBAF surface fluxes.
 - 3) Discontinuities with time in GEOS 5.4.1 meteorological inputs, which impact EBAF surface fluxes.
- New version will be called EBAF Ed4.2.
- **Timeline:** Reprocessing of input data needed for EBAF Ed4.2 will start this fall and complete in spring 2022. Anticipate public release of EBAF Ed4.2 during fall of 2022.

Impact of a Change in MLT on SW Reflected Solar Radiation

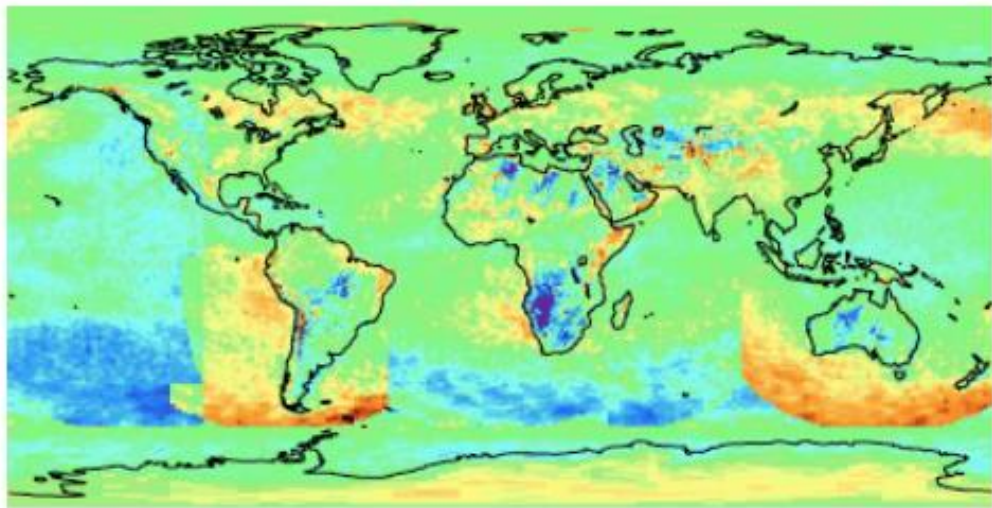

- Compare GERB SW TOA flux at 10:15 am, 10:00 am and 9:00 am vs 10:30 am
- Normalize each observation to a common 10:30 am solar geometry

- To avoid discontinuity in CERES record, MLT must remain within 15 min of 10:30 am for Terra and 1:35 pm for Aqua.
- EBAF will be reprocessed to ensure an MLT < 15 min by transitioning from Terra+Aqua to NOAA-20.

Downward LW Flux at Surface: Sensitivity to GEO Cloud Retrieval Artifacts (Computed DLW MODIS-Only minus Computed DLW MODIS+GEO)

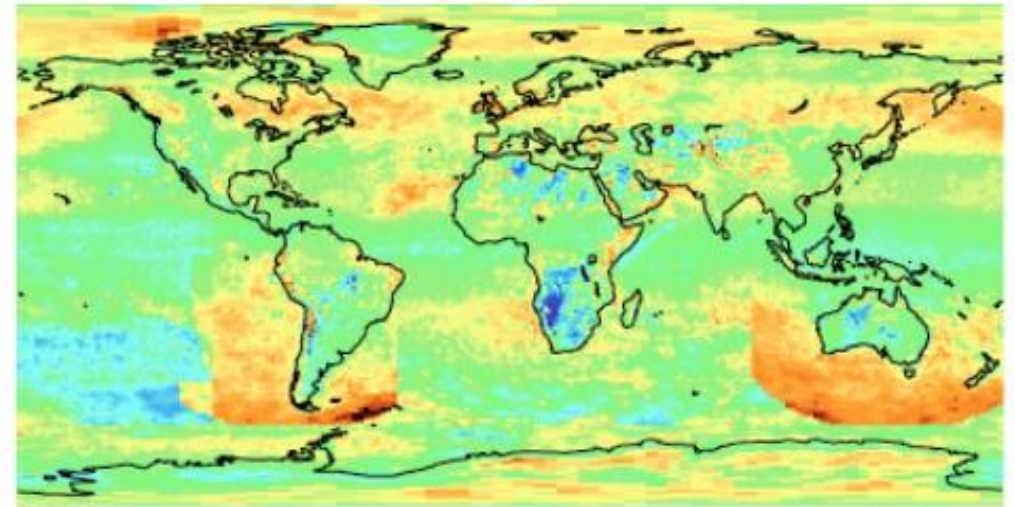

Ter+Aqu_MODIS minus SYN1deg_Ter+Aqu+GEO
(July 2019)

-14.5 -8.7 -2.9 2.9 8.7 14.5

Difference (Wm^{-2})

Terra+Aqua_MODIS minus EBAF Ed4.1
(July 2019)

-20 -12 -4 4 12 20

Difference (Wm^{-2})

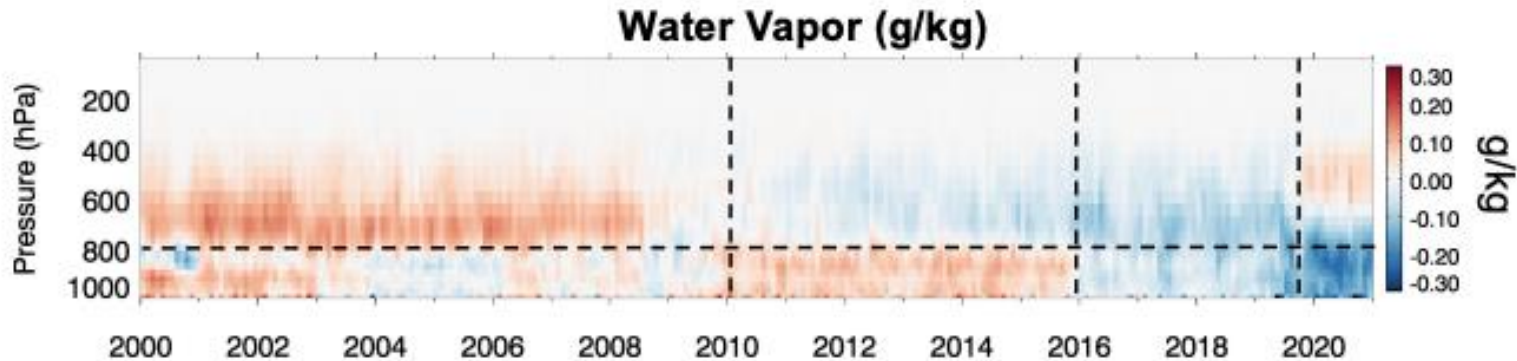

- The largest effects of GEO artifacts on surface downward longwave flux come from nighttime cloud optical thickness (and depend on GEO).

Discontinuities in GEOS 5.4.1 Water Vapor Profiles

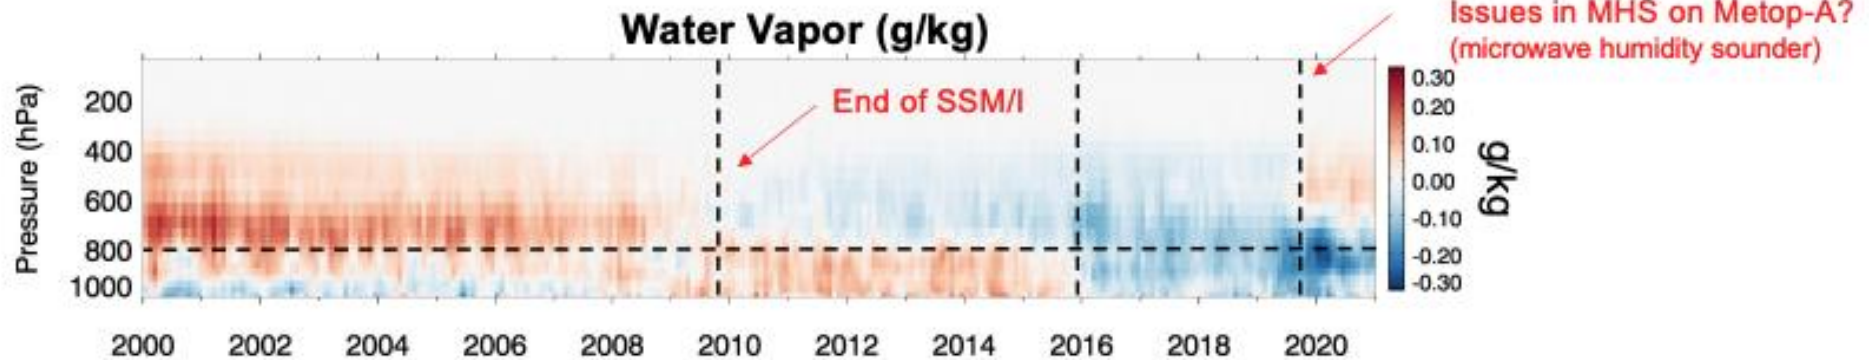

60S-60N Land+Ocean

Area weighted; climatology is obtained using 2003-2020

[G-5.4.1 WV Anomalies] – [MERRA-2 WV Anomalies]

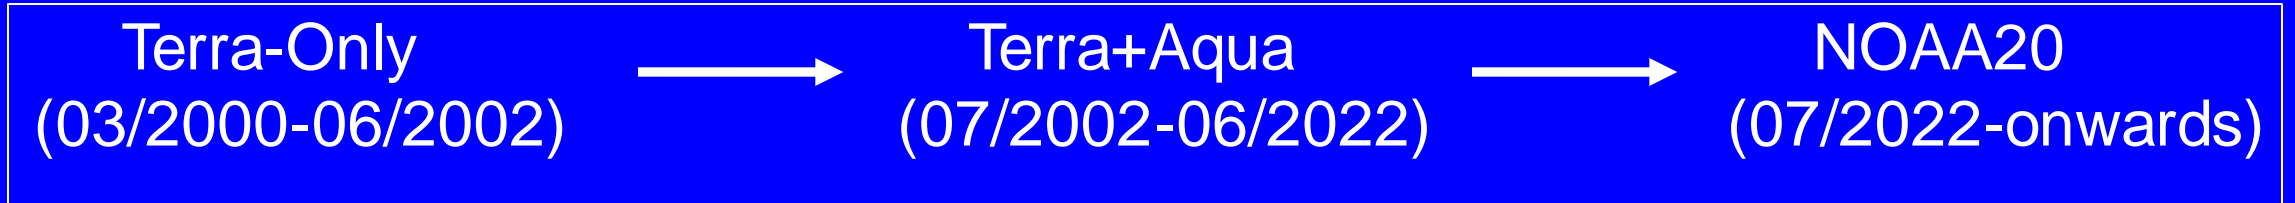

[G-5.4.1 WV Anomalies] – [ERA-5 WV Anomalies]

- The differences between G541 and ERA5 are similar to those between G541 and MERRA-2.
- This implies that the differences are mainly driven by G541 problems.
- The discontinuities in G541 might be related to input observing data changes.

Planned Changes in EBAF Processing

1) Transition to NOAA-20:

Note: Climatology of Terra-Only and NOAA20-Only will be anchored to Terra+Aqua climatology using overlapping periods.

- 2) EBAF-Surface fluxes will be processed with MODIS/VIIRS imager cloud retrievals (no GEO).
- 3) EBAF-Surface fluxes will be re-calculated using MERRA-2 meteorological inputs.
 - MODIS/VIIRS imager cloud properties will not be reprocessed (based upon GEOS 5.4.1)

Terra-Only & NOAA20-Only Climatological Adjustment

- **Terra-Only:** Use 5-year overlap with Terra+Aqua (07/2002-06/2007) to anchor Terra-Only period (03/2000-06/2002) to Terra+Aqua.
- **NOAA20-Only:** Use 4-year overlap with Terra+Aqua (05/2018-04/2022) to anchor NOAA20-Only period (07/2022-onwards) to Terra+Aqua.

$$F'_T(\lambda, \phi; yr, mn) = F_T(\lambda, \phi; yr, mn) + \{\bar{F}_{TA}^O(\lambda, \phi; mn) - \bar{F}_T^O(\lambda, \phi; mn)\}$$

$$= F_T(\lambda, \phi; yr, mn) + \bar{\Delta}^O(\lambda, \phi; mn)$$

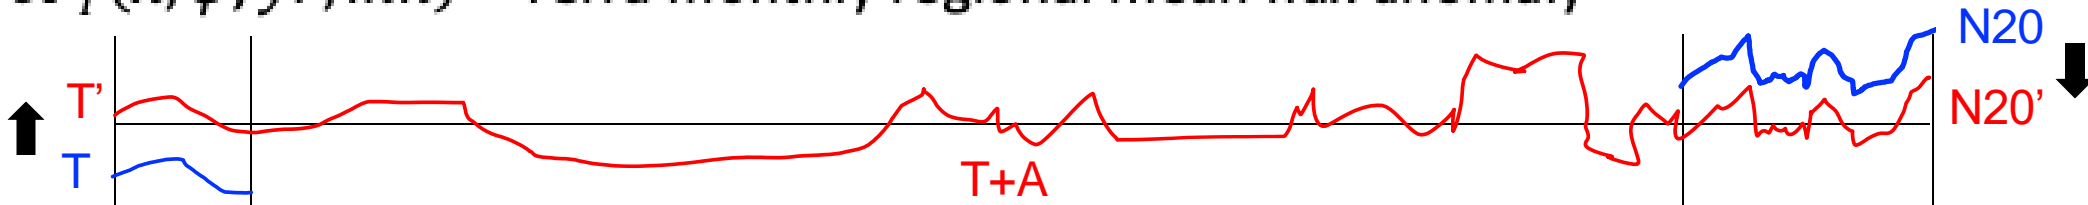

By definition: $\delta F'_T(\lambda, \phi; yr, mn) = \delta F_T(\lambda, \phi; yr, mn)$

$F_T(\lambda, \phi; yr, mn)$ = Terra monthly regional mean flux

$\bar{F}_T^O(\lambda, \phi; mn)$ = Terra climatological monthly regional mean flux for overlap period

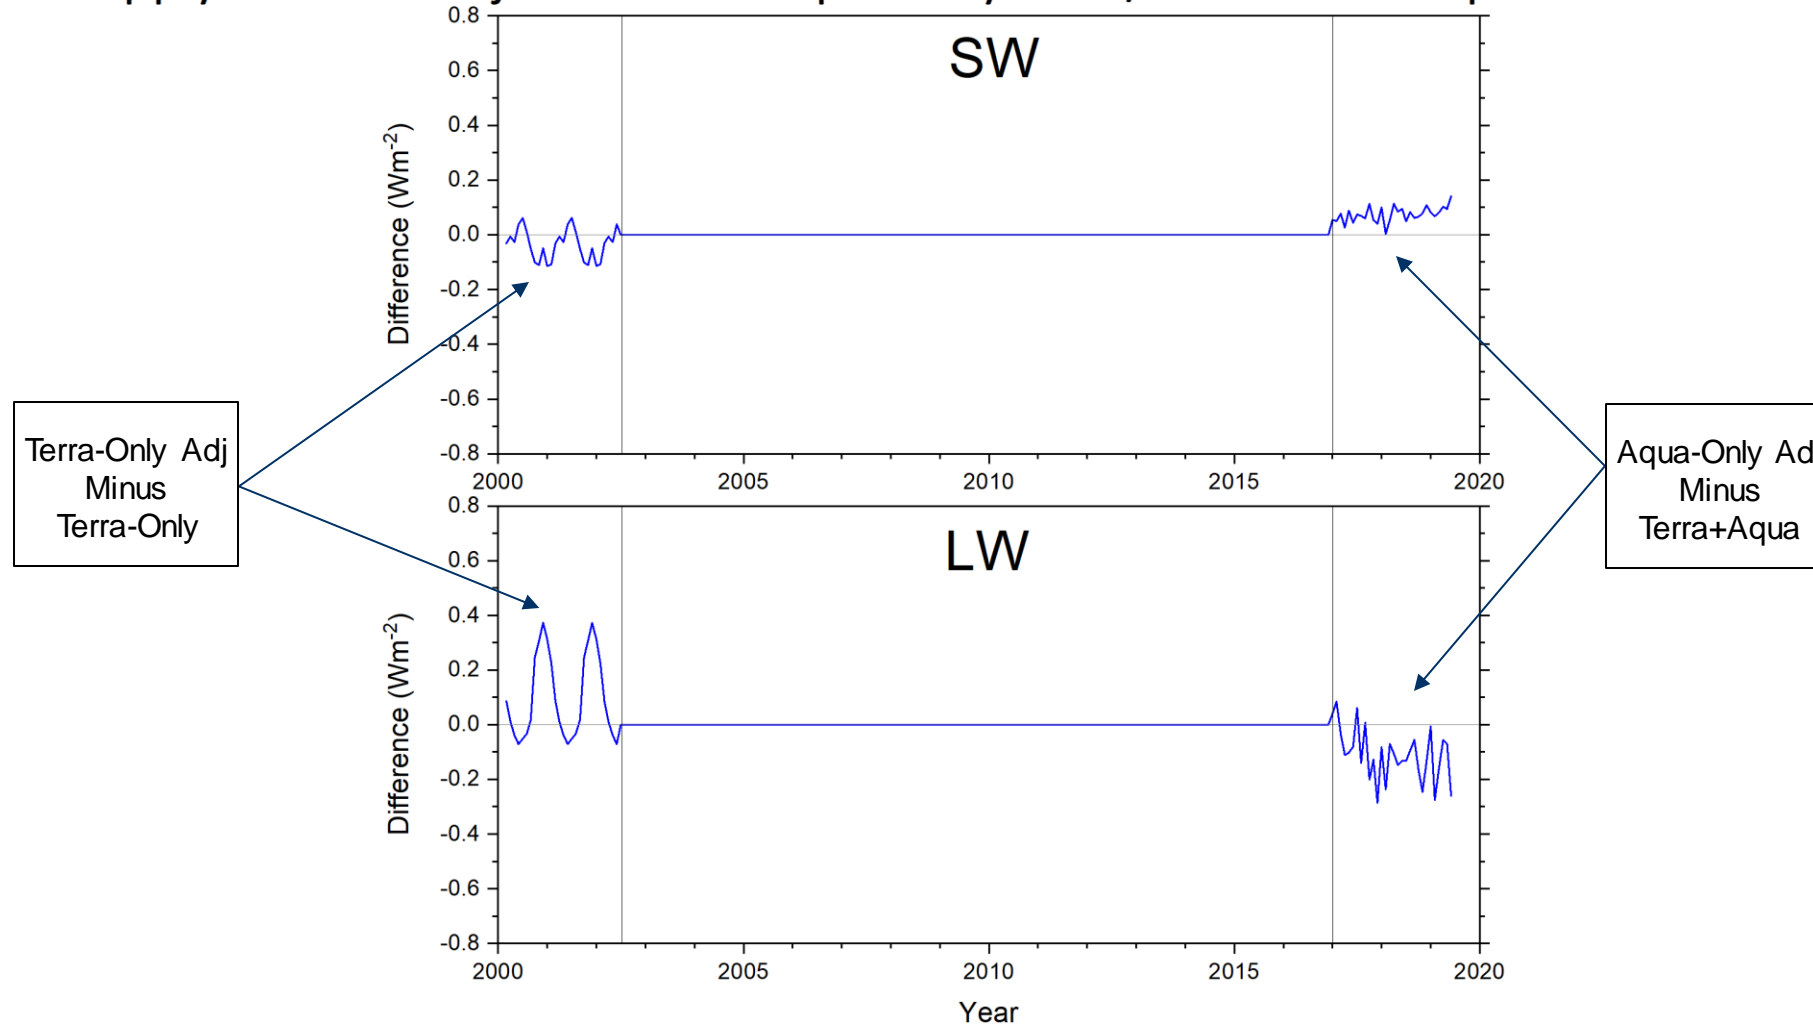

$\bar{F}_{TA}^O(\lambda, \phi; mn)$ = Terra+Aqua climatological monthly regional mean flux for overlap period

$\delta F_T(\lambda, \phi; yr, mn)$ = Terra monthly regional mean flux anomaly

Impact of Climatological Adjustment on Global Mean TOA Flux

- Apply climatol. adjustment to Terra-Only vs no adjustment.
- Apply climatol. adjustment to Aqua-Only in 01/2017 and compare with Terra+Aqua

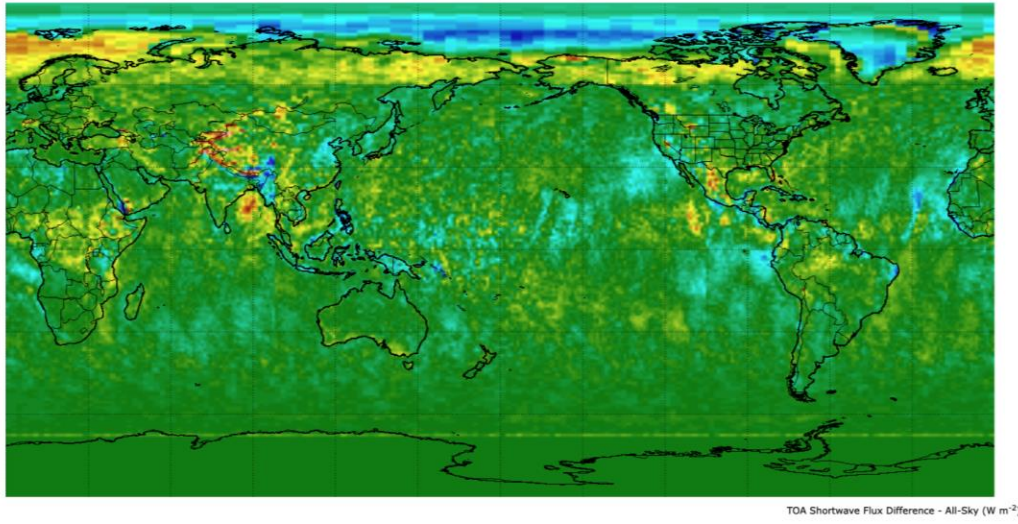

Impact on trends

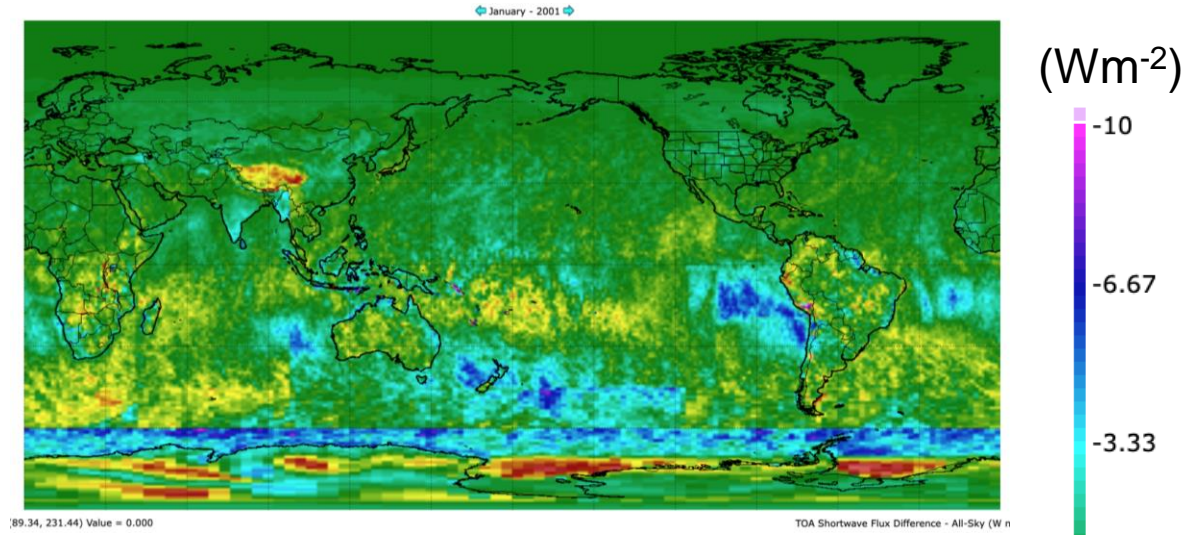

SW: 0.04 Wm^{-2} per decade; LW: -0.07 Wm^{-2} per decade

SW TOA Flux Difference

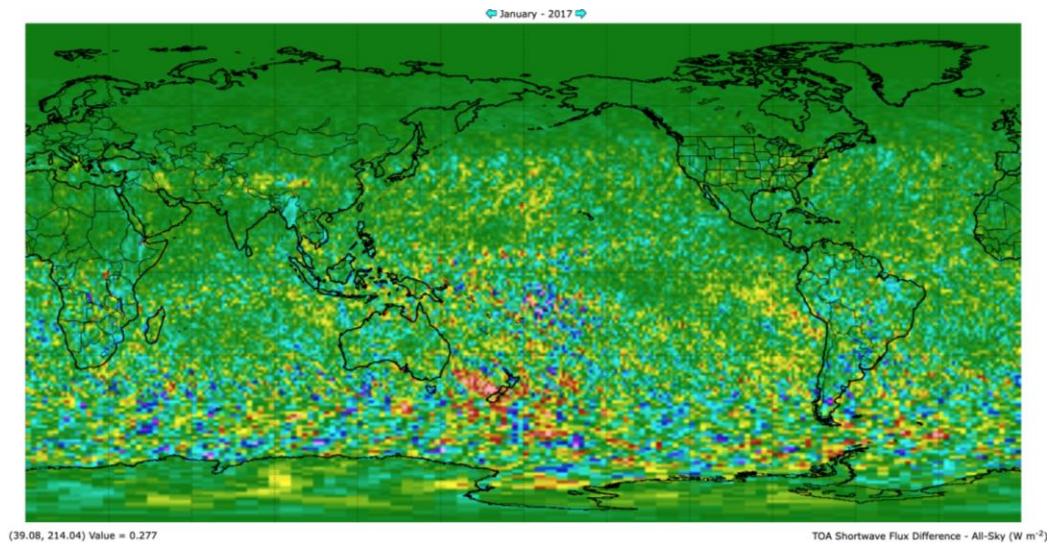

Terra-Only_Adj minus Terra-Only (July 2000)

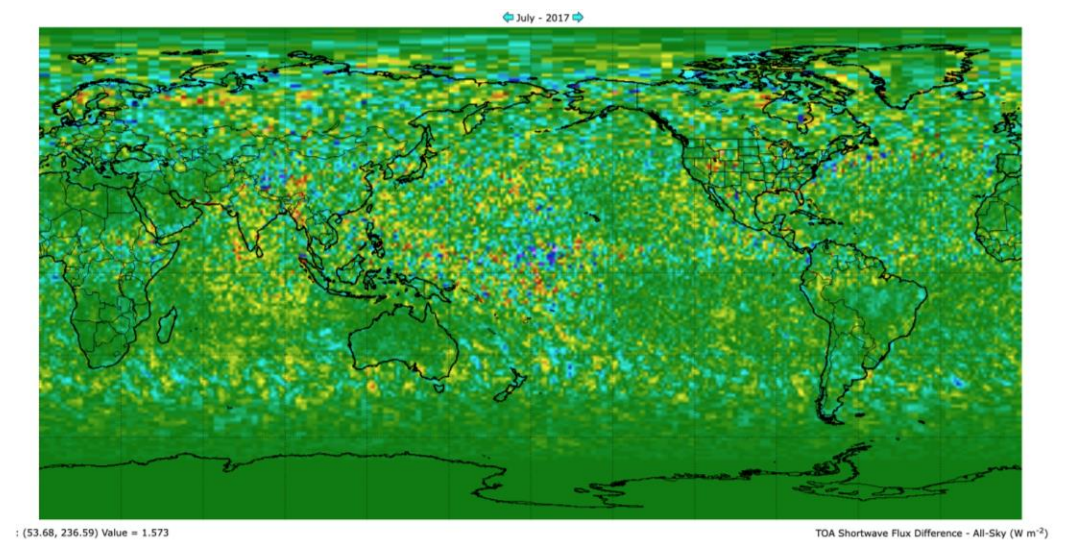

Terra-Only_Adj minus Terra-Only (January 2001)

Aqua-Only_Adj minus Terra+Aqua (January 2017)

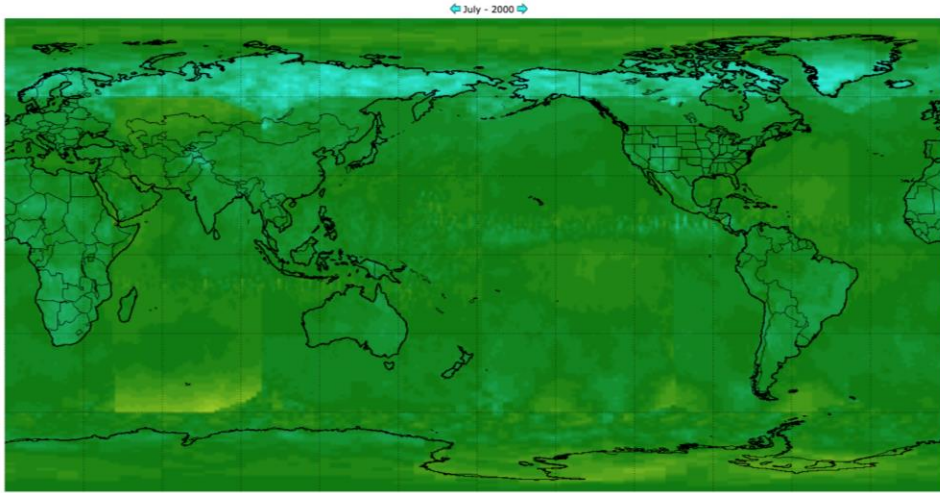

Aqua-Only_Adj minus Terra+Aqua (July 2017)

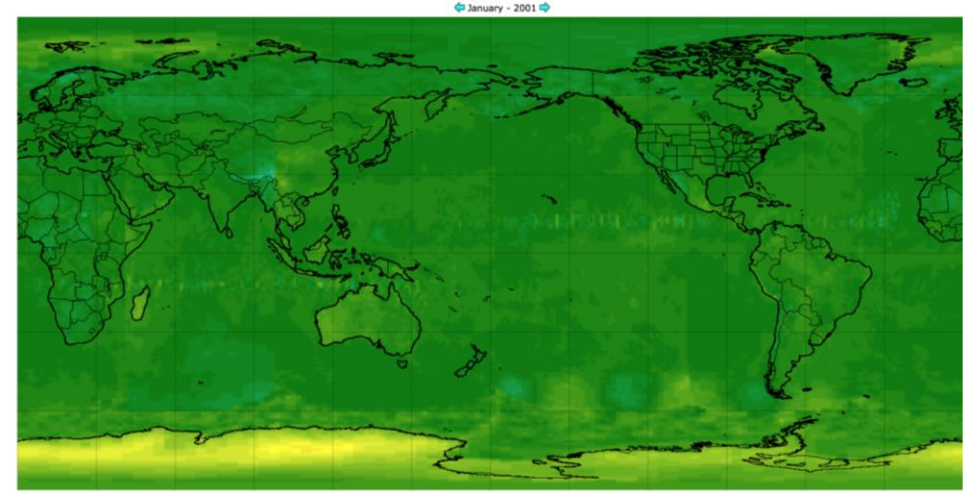

LW TOA Flux Difference

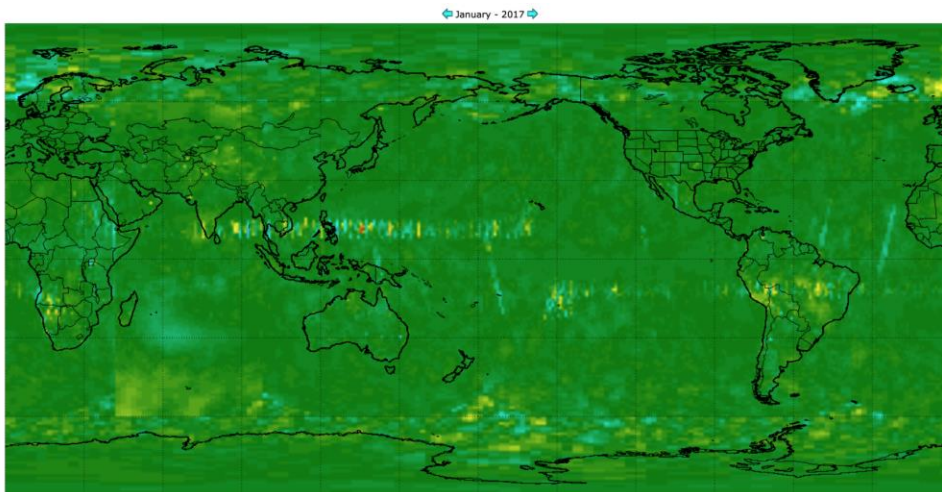

Terra-Only_Adj minus Terra-Only (July 2000)

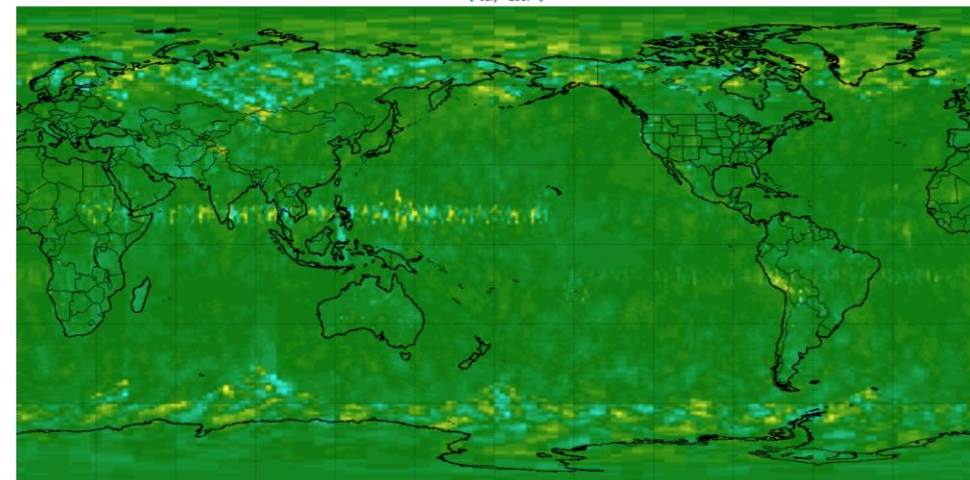

Terra-Only_Adj minus Terra-Only (January 2001)

Aqua-Only_Adj minus Terra+Aqua (January 2017)

Aqua-Only_Adj minus Terra+Aqua (July 2017)

(Wm⁻²)

Other Changes to EBAF-TOA

- Small correction to GEO-derived diurnal asymmetry ratio used for diurnal averaging near the date-line (GMT-to-local time conversion bug fix).
- Continue to use SYN1deg LW fluxes as key input to EBAF (uses GEO imagers and GEOS5.4.1).
- Generate NOAA-20 SSF1deg and SYN1deg inputs to EBAF.
- Ensure a seamless transition of EBAF Aqua-based clear-sky TOA flux to NOAA20-based clear-sky TOA flux.
